

**Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1.(currently amended) A multi-display device, wherein a plurality of basic displays or basic units are horizontally arranged, a central basic display or central basic unit is supported and held in an inclined state by an inclination mechanism, lateral basic displays or lateral basic units are connected to and supported on the central basic display or central basic unit respectively by hinge members so that a distance between upper portions of adjacent central and lateral basic displays or basic units is different from a distance between lower portions of the adjacent central and lateral basic displays or basic units, each of the hinge members includes a vertical king-pin having a plurality of leaves at an upper side portion thereof for connection to said upper portions of adjacent central and lateral basic displays or basic units and plurality of leaves at a lower side portion thereof for connection to said lower portions of adjacent central and lateral basic displays or basic units; and wherein a distance between [a] said connection position of a respective one of said leaf of the hinge member to the basic display or basic unit and a center of [a] said vertical king-pin [of the hinge member] at [an] said upper side portion of the hinge member is different from [one] a distance between said connection position of a respective one of said leaf of the hinge member to the basic display or basic unit and a center of said vertical king-pin at [a] said lower side portion thereof, and the king-pin is free and

spaced from the basic displays or basic units.

3.(Previously Amended) A multi-display device according to claim 1, wherein, in the connection using the hinge member, an upper side connection portion and a lower side connection portion are integrated in one hinge member.
